

MEDIASTINAL

Meaning: Mediastinal refers to the anatomical region in the chest between the lungs that contains vital structures such as the heart, trachea, esophagus, and major blood vessels.

1. The doctor explained that the mediastinal space is crucial for housing important structures in the chest.
2. A mediastinal tumor can lead to various symptoms depending on its size and location.
3. Imaging studies revealed an enlarged mediastinal lymph node, raising concerns for possible infection or malignancy.
4. The mediastinal region contains critical components such as the heart, trachea, and esophagus.
5. During the surgery, the team focused on the mediastinal area to ensure no vital organs were affected.
