

MELANMIA

Meaning: Melanomia is a type of skin cancer characterized by the uncontrolled growth of melanocytes, often confused with other skin conditions.

1. Melanomia is often mistaken for more common skin conditions, leading to delayed diagnosis.
2. The research team focused on the genetic markers associated with melanomia to improve early detection.
3. After her dermatologist identified a suspicious mole, she was referred for a biopsy to rule out melanomia.
4. Understanding the risk factors for melanomia is crucial for effective prevention strategies.
5. The patient was relieved to learn that her skin lesion was benign and not melanomia.
