

MENSURATION

Meaning: Mensuration is the branch of mathematics that involves the measurement of geometric shapes and figures, including their area and volume.

1. Mensuration is a fundamental concept in geometry that deals with the measurement of shapes and figures.
2. In school, we learned about mensuration through various problems involving the area and volume of different geometric solids.
3. Understanding mensuration is essential for fields such as architecture and engineering, where precise measurements are crucial.
4. The mensuration techniques taught in mathematics can be applied in real-life situations, like calculating the amount of paint needed for a room.
5. He excelled in mensuration, easily solving complex problems involving circles, triangles, and polygons.
