

MESONOTUM

Meaning: Mesonotum is the middle section of the dorsal thoracic plate in insects, located between the prothorax and metathorax.

1. The mesonotum is a crucial part of the thorax in many insect species.
2. In entomology, the term mesonotum refers specifically to the middle section of the dorsal thoracic plate.
3. The distinctive markings on the mesonotum can help in identifying different species of beetles.
4. Researchers noted that the mesonotum's structure varies significantly among various orders of insects.
5. During the study, the team examined the mesonotum for signs of wear and adaptation to environmental changes.
