

METALLIZATION

Meaning: Metallization is the process of applying a thin layer of metal to a surface to improve its conductivity and other properties, often used in the manufacturing of electronic components.

1. Metallization is a crucial process in the manufacturing of electronic components.
2. The metallization of the surface enhances the conductivity of the material.
3. Researchers are exploring new techniques for the metallization of organic substrates.
4. Efficient metallization can significantly improve the performance of solar cells.
5. Advancements in metallization technology have led to lighter and more durable materials.
