

METANOTUM

Meaning: Metanotum: the dorsal part of the thorax in certain insects, located behind the notum, used in classification and identification of species.

1. The metanotum is an important anatomical feature in the classification of certain insects.
2. Entomologists often examine the metanotum to distinguish between closely related species.
3. In many beetles, the texture of the metanotum can provide insights into their evolutionary adaptations.
4. During the dissection, we carefully noted the structure of the metanotum to gather accurate data.
5. The metanotum plays a crucial role in the attachment of muscles that facilitate wing movement.
