

METATUNGSTIC

Meaning: Metatungstic refers to a type of acid or compound containing multiple tungsten atoms, often used as a catalyst in chemical reactions and studied for its properties in various applications, including nanotechnology.

1. The metatungstic acid solution proved to be an effective catalyst in the chemical reaction.
2. Researchers are exploring the properties of metatungstic compounds for potential applications in nanotechnology.
3. In the lab, the team synthesized metatungstic salts to study their unique crystalline structures.
4. The metatungstic framework exhibited remarkable stability under high temperatures, making it suitable for industrial use.
5. He presented his findings on metatungstic derivatives at the annual chemistry conference, garnering significant interest.
