

METEOR

Meaning: Meteor: A small celestial body that enters the Earth's atmosphere and produces a bright streak of light as it burns up.

1. The meteor streaked across the night sky, leaving a brilliant trail behind it.
2. Astronomers often track meteor showers to learn more about the composition of space debris.
3. During the annual Perseid meteor shower, thousands of spectators gathered to witness the celestial event.
4. In ancient cultures, meteors were often interpreted as omens or messages from the gods.
5. When a meteor enters the Earth's atmosphere, it heats up and can create a spectacular display of light.
