

METEOROGRAPH

Meaning: A meteorograph is an instrument that records and analyzes atmospheric conditions, such as temperature and pressure, over time.

1. The meteorograph recorded a sudden drop in temperature as a storm approached the area.
2. Researchers used a meteorograph to analyze atmospheric pressure changes over time.
3. In the lab, the students examined the data collected by the meteorograph during the previous month.
4. Accurate readings from the meteorograph helped meteorologists predict the unusually harsh winter.
5. The design of the meteorograph has evolved significantly since its invention, incorporating advanced technology.
