

MIASM

Meaning: Miasm is a noxious or toxic influence, historically thought to be a cause of disease, particularly through contaminated air or environmental factors.

1. The ancient texts describe miasm as a toxic influence that can affect the health of those who breathe it in.
2. In the 19th century, many believed that miasm caused diseases like cholera and malaria, leading to widespread public health reforms.
3. The doctor explained that the foul air from the marshlands was thought to carry miasm, leading to outbreaks of illness in nearby towns.
4. Cultural beliefs often attributed miasm to supernatural forces, complicating the acceptance of scientific explanations for disease transmission.
5. Today, the term miasm is largely obsolete, replaced by modern understanding of pathogens and environmental toxins.
