

MICRO-CHEMICAL

Meaning: Micro-chemical refers to the study or analysis of chemical substances at a very small scale, often involving detailed examination of their composition and properties.

1. The micro-chemical analysis revealed critical insights into the composition of the sample.
2. Researchers are developing micro-chemical techniques to enhance the efficiency of drug delivery systems.
3. In the lab, we utilized micro-chemical methods to detect trace elements in the water supply.
4. The micro-chemical reactions observed during the experiment were both rapid and highly specific.
5. Advancements in micro-chemical technology are paving the way for breakthroughs in nanomaterials research.
