

# MIDRIB

*Meaning: Midrib (noun): the central vein of a leaf that provides support and transports nutrients throughout the plant.*

1. The midrib of the leaf serves as a central support structure, distributing nutrients evenly.
2. Botanists often examine the midrib to understand the vascular system of various plant species.
3. During dissection, we noted that the midrib was significantly thicker in the tropical variety.
4. The midrib is crucial for leaf rigidity, allowing plants to withstand strong winds.
5. In some species, the coloration of the midrib can indicate the plant's health and vitality.
