

MIGRATION

Meaning: Migration is the movement of people, animals, or organisms from one place to another, often across regions or countries, typically in search of better living conditions or seasonal resources.

1. Migration can significantly impact the economy of both the home and host countries.
2. The annual migration of birds south for the winter is a spectacular natural event.
3. Many species face challenges during migration due to climate change and habitat loss.
4. Migration patterns can reveal important information about environmental changes over time.
5. The study of human migration helps us understand cultural exchanges throughout history.
