

MINERALIZATION

Meaning: Mineralization is the process by which organic matter is converted into inorganic minerals, often involving the transformation of nutrients in the environment.

1. Mineralization is a crucial process in the formation of fossil fuels over millions of years.
2. The study of mineralization in plants can reveal how they adapt to nutrient-poor soils.
3. Researchers are investigating the role of mineralization in carbon cycling within various ecosystems.
4. In geology, mineralization refers to the process by which minerals are deposited in rocks and soils.
5. The process of mineralization can significantly affect the availability of essential nutrients in agricultural practices.
