MIOCENE

Meaning: MIOCENE refers to a geological epoch in the Neogene period, approximately 23 to 5 million years ago, characterized by significant evolutionary developments in mammals and birds and notable climate changes.

1. The MIOCENE epoch marked a significant period in the evolution of mammals and birds.
2. Fossils from the MIOCENE provide valuable insights into the climate changes of that era.
3. During the MIOCENE, many modern genera began to emerge, shaping ecosystems as we know them today.
4. Researchers are studying MIOCENE sediment layers to understand ancient environmental conditions.
5. The transition from the MIOCENE to the Pliocene was characterized by notable shifts in biodiversity.
