

MISCIBLE

Meaning: Miscible: capable of being mixed together in any proportion without separating into layers.

1. Water and ethanol are miscible, allowing them to mix evenly in any proportion.
2. Certain oils are not miscible with water, resulting in a distinct layer when combined.
3. In chemistry, miscible liquids can form a homogeneous solution, making them easier to study.
4. The miscibility of different solvents can significantly affect the outcomes of chemical reactions.
5. Understanding which substances are miscible is crucial in fields like pharmaceuticals and materials science.
