

MOISTURE

Meaning: Moisture is the presence of water or water vapor in the air or within a substance, contributing to humidity or the hydration of living organisms.

1. The air was thick with moisture, making it feel much warmer than it actually was.
2. Plants thrive in environments with adequate moisture, ensuring they grow strong and healthy.
3. Excess moisture in the walls can lead to mold growth and serious structural damage.
4. The meteorologist predicted a chance of rain, which would increase the moisture levels in the atmosphere.
5. To maintain the freshness of the cake, it's essential to control the moisture content in the batter.
