MOLYBDENUM

Meaning: Molybdenum is a chemical element (symbol Mo) that is used in steel alloys for strength and durability and is also important in the biological processes of some microorganisms.

1. Molybdenum is an essential element used in many steel alloys to enhance their strength and durability.

2. The researchers discovered that molybdenum plays a critical role in the biological processes of certain microorganisms.

3. In the field of electronics, molybdenum is often utilized for its excellent conductivity and heat resistance.

4. The absence of molybdenum in the soil can lead to deficiencies in crops, affecting their growth and yield.

5. Due to its high melting point, molybdenum is frequently used in aerospace applications where extreme temperatures are encountered.
