

MONOMETRIC

Meaning: Monometric refers to a property or structure involving a single metric or term, often simplifying complex systems or equations by focusing on one dimension or variable.

1. The study of monometric structures has revealed new insights into the behavior of certain materials.
2. In mathematics, monometric equations can simplify complex calculations by reducing multiple variables to a single term.
3. The architect designed a monometric facade that emphasized minimalism and streamlined aesthetics.
4. Researchers in the field of physics are exploring monometric measurements to improve the accuracy of their experiments.
5. The artist's monometric style presented a unique challenge in conveying depth and dimension on a flat canvas.
