

MONOPHTHONG

Meaning: A monophthong is a vowel sound that remains constant and does not glide into another vowel sound during its pronunciation.

1. The word "cat" contains a monophthong, as it features a single vowel sound.
2. In phonetics, a monophthong is a pure vowel sound that does not change during its articulation.
3. Some dialects of English have more monophthongs than others, affecting their pronunciation.
4. Teaching students about monophthongs can help improve their understanding of vowel sounds.
5. Linguists often analyze speech patterns to identify whether a vowel is a monophthong or a diphthong.
