

MORPHOLOGY

Meaning: Morphology is the study of the structure and formation of words in linguistics, or the form and structure of organisms and their specific features in biology.

1. The study of morphology helps linguists understand the structure and formation of words.
2. In biology, morphology refers to the form and structure of organisms and their specific features.
3. Children often demonstrate remarkable morphological awareness as they learn to construct complex words.
4. The morphological differences between species can provide insights into their evolutionary history.
5. Understanding the morphology of a language is crucial for effective language teaching and learning.
