

# MUTATION

*Meaning: Mutation is a change in the genetic material of an organism that can introduce new variations and potentially influence evolutionary processes or traits.*

1. Mutation is a key driver of evolution, introducing new genetic variations into populations.
2. Researchers are studying how certain mutations can lead to resistance against specific diseases.
3. In the context of cancer, a mutation may cause cells to grow uncontrollably and form tumors.
4. Not all mutations are harmful; some can provide beneficial traits that enhance survival.
5. The rapid mutation of viruses often complicates vaccine development and public health responses.
