

NASOFRONTAL

Meaning: Nasofrontal refers to the anatomical area or angle between the nose and the forehead, significant in facial aesthetics and trauma assessment.

1. The nasofrontal angle is crucial in assessing the aesthetic balance of the face.
2. In cases of facial trauma, the integrity of the nasofrontal region can be severely compromised.
3. Surgeons often consider the nasofrontal junction when planning reconstructive procedures.
4. The nasofrontal duct plays a significant role in drainage and preventing sinus infections.
5. Anomalies in the nasofrontal area can lead to complications in pediatric patients.
