

NASOLACHRYMAL

Meaning: Nasolachrymal refers to the anatomical structures and system related to the drainage of tears from the eyes into the nasal cavity.

1. The nasolacrimal duct plays a crucial role in draining tears from the eyes into the nasal cavity.
2. In cases of chronic sinusitis, the nasolacrimal system can become obstructed, leading to excessive tearing.
3. Anatomical variations in the nasolacrimal canal can affect an individual's susceptibility to certain eye conditions.
4. During the surgery, the surgeon carefully examined the nasolacrimal passage to ensure proper fluid drainage.
5. Inflammation of the nasolacrimal sac can result in a painful condition known as dacryocystitis.
