NASOTURBINAL

Meaning: Nasoturbinal refers to a bone in the nasal cavity that contributes to its structure and function, particularly in air filtration.

1. The nasoturbinal bone plays a crucial role in the structure of the nasal cavity.
2. In some species, the development of the nasoturbinal is key to their ability to filter air efficiently.
3. Research on the nasoturbinal has provided insights into the evolution of respiratory systems in vertebrates.
4. The presence of a well-formed nasoturbinal can indicate adaptations to specific environmental conditions.
5. Anatomical studies often highlight the significance of the nasoturbinal in the context of nasal airflow dynamics.
