

# NECROSIS

*Meaning: Necrosis is the death of cells or tissues in a specific area, often due to insufficient blood supply, leading to potential complications.*

1. Necrosis of the tissue can lead to severe complications if not treated promptly.
2. The doctor explained that necrosis occurs when cells in an area die due to lack of blood supply.
3. In patients with diabetes, necrosis is often seen in the extremities due to poor circulation.
4. The pathologist noted that the sample displayed areas of necrosis indicative of a serious underlying condition.
5. Effective treatment for necrosis often requires surgical intervention to remove the dead tissue.
