

NEO-DARWINISM

Meaning: Neo-Darwinism is a theory of evolution that integrates Charles Darwin's natural selection with modern genetic principles to explain the mechanisms of species adaptation and evolution.

1. Neo-Darwinism combines Charles Darwin's theory of evolution with modern genetics to explain how species adapt over time.
2. The principles of neo-Darwinism have revolutionized our understanding of evolutionary biology.
3. Critics of neo-Darwinism often argue that it does not fully account for the role of environmental factors in evolution.
4. In neo-Darwinism, natural selection acts on genetic variations within populations, driving evolutionary change.
5. The debate between neo-Darwinism and alternative theories continues to shape discussions in the field of evolutionary science.
