

NEPHRITIC

Meaning: Nephritic refers to a condition related to or characterized by inflammation of the kidneys, often resulting in symptoms such as hematuria and proteinuria.

1. The patient exhibited symptoms consistent with nephritic syndrome, including hematuria and proteinuria.
2. A nephritic condition can lead to significant kidney damage if not diagnosed and treated promptly.
3. Doctors often recommend a renal biopsy to confirm a nephritic diagnosis and determine the underlying cause.
4. Increased blood pressure can be a common complication associated with nephritic disorders.
5. The nephritic process involves inflammation of the kidney's filtering units, which can compromise their function.
