

NEPTUNE

Meaning: Neptune is the eighth and farthest planet from the Sun in the solar system, known for its striking blue color caused by methane in its atmosphere.

1. Neptune is the farthest planet from the Sun in our solar system.
2. The deep blue color of Neptune is due to the presence of methane in its atmosphere.
3. Astronomers were able to discover Neptune by predicting its position based on the gravitational effects it had on Uranus.
4. Many of Neptune's moons are named after characters from Greek mythology, adding to the planet's mysterious allure.
5. NASA's Voyager 2 spacecraft provided the first close-up images of Neptune in 1989, revealing its dynamic weather patterns.
