

NEUROKERATIN

Meaning: Neurokeratin is a protein located in the cytoskeleton of neurons that contributes to their stability and structural integrity.

1. Neurokeratin is a crucial protein found in the cytoskeleton of neurons.
2. Researchers have discovered that neurokeratin plays a significant role in maintaining neuronal stability.
3. The role of neurokeratin in neurodegenerative diseases is an area of active study.
4. In experiments, the depletion of neurokeratin led to increased sensitivity in neuronal cells.
5. Understanding the function of neurokeratin could lead to new therapies for brain injuries.
