NEUROPTEROUS

Meaning: Neuropterous refers to insects belonging to the order Neuroptera, characterized by their net-like wing venation and often including species such as lacewings and antlions.

1. The neuropterous insects, known for their delicate wings, often captivate nature enthusiasts.

2. Entomologists study the diverse characteristics of neuropterous species to better understand their ecological roles.

3. The larvae of neuropterous insects are often predatory, making them beneficial for controlling pest populations.

4. In the garden, I was delighted to spot a neuropterous adult hovering near the flowers, showcasing its intricate wing patterns.

5. Due to their unique morphology, neuropterous insects are sometimes referred to as "lacewings" by amateur naturalists.
