

NICTITATION

Meaning: Nictitation is the rapid movement of the eyelid or a protective covering over the eye, often seen in animals as an adaptation for safeguarding vision.

1. The nictitation of the owl is a fascinating adaptation that helps protect its eyes while hunting in the dark.
2. During a lecture on animal behavior, the professor described the nictitation of various species as a form of protective eye movement.
3. The sudden nictitation of the frog caught the attention of researchers studying its unique vision.
4. In some reptiles, nictitation serves to keep the eye moist and free from debris.
5. The swift nictitation observed in certain birds allows them to maintain clarity of vision while navigating through dense foliage.
