

NITRANILINE

Meaning: Nitraniline is a chemical compound used as an intermediate in the synthesis of dyes and other chemicals in organic chemistry.

1. Nitraniline is often used as an intermediate in the synthesis of various dyes and chemicals.
2. The discovery of nitraniline in the laboratory opened new avenues for research in organic chemistry.
3. Safety protocols are essential when handling nitraniline due to its potential toxicity.
4. Researchers are exploring the use of nitraniline derivatives in pharmaceutical applications.
5. The chemical structure of nitraniline features both nitro and amine functional groups, making it particularly interesting for study.
