

NITROSYLIC

Meaning: Nitrosylic refers to a class of chemical compounds that contain a nitroso group (-NO) attached to a silicon atom or a silicon-containing structure.

1. The chemist was fascinated by the unique properties of nitrosylic compounds.
2. In the laboratory, they successfully synthesized a nitrosylic derivative that showed promising results.
3. Researchers are exploring the applications of nitrosylic materials in targeted drug delivery systems.
4. The discovery of nitrosylic intermediates has opened new avenues in organic chemistry.
5. Understanding the behavior of nitrosylic groups is crucial for developing effective catalysts.
