

# NONCONDENSING

*Meaning: Noncondensing refers to steam or a system that does not undergo condensation, thereby remaining in vapor form to prevent moisture accumulation and enhance efficiency.*

1. Noncondensing steam is often used in power plants to maximize efficiency.
2. The engineer specified a noncondensing system to prevent moisture buildup in the equipment.
3. In noncondensing heating systems, the heat is transferred without the risk of condensation.
4. A noncondensing process can lead to higher thermal losses compared to condensing alternatives.
5. Choosing a noncondensing design can simplify maintenance and reduce operational costs.
