

NONCONDUCTOR

Meaning: Nonconductor: a material that does not allow the flow of electric current, often used for insulation in electrical applications.

1. A nonconductor is essential in preventing electrical currents from passing through unwanted areas.
2. When designing electrical circuits, engineers often select nonconductors for insulation purposes.
3. The nonconductor properties of rubber make it a popular choice for protecting wires.
4. In physics class, we learned that glass is a common example of a nonconductor.
5. Nonconductors play a crucial role in ensuring safety in high-voltage environments.
