

OLIGOMEROUS

Meaning: Oligomeric refers to a chemical structure composed of a small number of repeating units, typically between two and ten, that form oligomers, which are larger than monomers but smaller than polymers.

1. The research focused on the characteristics of oligomeric compounds in organic chemistry.
2. In the study of polymers, oligomeric structures often exhibit unique properties compared to their larger counterparts.
3. The scientist proposed a new method for synthesizing oligomeric materials with enhanced stability.
4. Understanding the behavior of oligomeric substances is crucial for developing more efficient catalysts.
5. Her findings revealed that oligomeric arrangements can significantly impact the mechanical strength of the final product.
