

OXID

Meaning: 'Oxid' refers to the oxidation state or process of a chemical compound, indicating the degree of oxidation or loss of electrons in a reaction.

1. The chemist carefully analyzed the oxid state of the compound in the laboratory.
2. In the presence of heat, the oxid process accelerated significantly, changing the material's properties.
3. The researchers discovered that the oxid layer on the metal surface provided a protective barrier against corrosion.
4. During the experiment, the oxid reaction produced a noticeable amount of gas, indicating a chemical change.
5. Understanding the mechanisms of oxid reactions is crucial for developing more efficient energy storage systems.
