

# OXIDABLE

*Meaning: Oxidable refers to the property of a substance that is capable of undergoing oxidation, often resulting in corrosion or chemical reaction with oxygen.*

1. Certain metals are easily oxidable, which can lead to corrosion over time.
2. In the presence of moisture, the oxidable compounds in the material can react with oxygen in the air.
3. The chemist explained that oxidable substances require careful handling to prevent unwanted reactions.
4. Researchers are exploring new methods to stabilize oxidable elements in various industrial applications.
5. When exposed to heat, the oxidable layers on the surface may change properties, affecting overall performance.
