

OXIDATION

Meaning: Oxidation is a chemical process in which a substance loses electrons, often associated with the production of energy in biological systems and the formation of rust in metals.

1. Oxidation is a crucial process in cellular respiration that helps produce energy.
2. The rusting of iron is a common example of oxidation occurring in everyday life.
3. In chemistry, oxidation refers to the loss of electrons from an atom or molecule.
4. The scientist conducted experiments to study the effects of oxidation on various metals.
5. Antioxidants are substances that can prevent or slow down the oxidation of other molecules.
