

OXIDATOR

Meaning: Oxidator: a substance that facilitates oxidation by providing or releasing oxygen in chemical reactions.

1. An oxidator is often used in chemical experiments to facilitate oxidation reactions.
2. In the process of combustion, oxygen acts as the primary oxidator, promoting the reaction.
3. Researchers are exploring new types of oxidators that can be more efficient in energy production.
4. Understanding the role of an oxidator is crucial for developing better catalysts in industrial processes.
5. The oxidator helped to enhance the reaction rate in the laboratory, yielding higher product quantities.
