

OXIDIZER

Meaning: An oxidizer is a substance that supplies oxygen or promotes combustion in a chemical reaction, often used in applications like rocket propulsion and flame sustenance.

1. An oxidizer is often used in rocket propulsion systems to enhance combustion efficiency.
2. The chemical reaction requires an oxidizer to sustain the flame and produce energy.
3. Many household cleaners contain oxidizers that help to break down organic stains.
4. In laboratory experiments, scientists carefully measure the amount of oxidizer to ensure accurate results.
5. Safety protocols must be followed when handling powerful oxidizers to prevent dangerous reactions.
