

OZONE

Meaning: Ozone is a colorless gas composed of three oxygen atoms (O₃) that occurs in the Earth's stratosphere, where it protects living organisms from harmful ultraviolet radiation, and is also associated with a sharp smell often noticed after thunderstorms.

1. Ozone in the Earth's stratosphere plays a crucial role in protecting us from harmful ultraviolet radiation.
2. The distinctive smell of ozone can often be detected after a thunderstorm.
3. Scientists are studying the effects of ozone depletion on climate change and its impact on ecosystems.
4. In urban areas, high levels of ground-level ozone can contribute to respiratory problems among residents.
5. Ozone therapy is being explored as a potential treatment for various medical conditions.
