

PALLIATIVE

Meaning: Palliative refers to medical care or treatments that focus on relieving symptoms and providing comfort to patients without aiming to cure the underlying disease.

1. The doctor explained that the treatment was palliative, aimed at providing comfort rather than a cure.
2. In hospice care, palliative measures are essential for ensuring patients experience dignity in their final days.
3. She chose a palliative approach to manage her chronic pain, focusing on quality of life rather than aggressive interventions.
4. The palliative team worked closely with the family to address both the medical and emotional needs of the patient.
5. Many healthcare providers are now recognizing the importance of palliative care in improving the overall well-being of patients with serious illnesses.
6. The hospital introduced a new palliative care program to improve the quality of life for terminally ill patients.
7. She found comfort in the palliative measures that eased her mother's pain during her final days.
8. Palliative treatments focus on providing relief from symptoms rather than curing the disease itself.
9. The team of doctors and nurses worked together to create a comprehensive palliative plan for each patient.
10. In addition to medication, palliative care often includes emotional support for families facing difficult decisions.
