

PARABLASTIC

Meaning: Parablastic refers to a type of tissue or structure in an organism characterized by a specific arrangement or layering, often associated with unique evolutionary adaptations and regenerative properties.

1. The parablastic structure of the organism revealed its unique evolutionary adaptations.
2. Researchers studied the parablastic tissue to better understand its regenerative capabilities.
3. In the laboratory, the parablastic layers of the cell were examined under a microscope for unusual properties.
4. The team hypothesized that the parablastic nature of the cells contributed to their resilience against environmental stressors.
5. During the experiment, the parablastic phase was crucial for observing cellular interactions.
