

PARACONIC

Meaning: Paraconic refers to a geometric shape or section that resembles or is derived from a parabola, often used in mathematical or physical contexts to describe specific properties or behaviors of functions or objects.

1. The paraconic section of the graph revealed interesting properties of the function.
2. Researchers found that the paraconic shape of the object influenced its aerodynamic performance.
3. In geometry, a paraconic curve can be described as a specific type of quadratic surface.
4. The artist's use of paraconic forms added a dynamic element to the sculpture.
5. Understanding the paraconic structure is essential for solving complex mathematical problems.
