

PARASYNTHETIC

Meaning: Parasynthetic refers to a linguistic process of word formation that involves the simultaneous use of affixation and compounding to create new words.

1. The term 'parasynthetic' describes a specific type of word formation in linguistics.
2. In many languages, parasynthetic constructions combine both affixation and compounding.
3. The parasynthetic approach can create complex meanings that are hard to achieve with simple morphemes.
4. Linguists often study parasynthetic languages to understand how they structure their vocabulary.
5. An example of a parasynthetic language is Inuktitut, where words are formed by layering affixes around roots.
