

PEBRINE

Meaning: Pebrine is a disease caused by a protozoan parasite that affects silkworms, leading to significant economic losses in the silk industry.

1. The outbreak of pebrine in the silkworm industry raised significant concerns among farmers.
2. Researchers are studying the genetic factors that may contribute to a silkworm's susceptibility to pebrine.
3. After the pebrine infection was detected, the entire batch of silkworms had to be destroyed to prevent further spread.
4. Historical records from the 19th century detail the devastating effects of pebrine on silk production in Europe.
5. Efforts to develop pebrine-resistant silkworm strains are crucial for the sustainability of the silk industry.
