

# PECTEN

*Meaning: Pecten refers to a specialized structure in the eyes of some birds that enhances vision or to the ridged shell of a scallop in marine biology.*

1. The pecten is a unique structure found in the eyes of certain species of birds, aiding in their vision.
2. In marine biology, the pecten refers to a scallop's ridged shell, which is often collected by divers.
3. Researchers are studying the pecten as a potential model for understanding complex visual processes in animals.
4. The vibrant colors of the pecten shell can be attributed to the way light interacts with its microscopic surface features.
5. Artisans often use pectens in their designs, celebrating their natural beauty and intricate patterns.
