

# PEDICULATION

*Meaning: Pediculation is the process by which a parasite attaches to a host organism.*

1. Pediculation refers to the process of attaching to a host organism, often seen in parasitic relationships.
2. The study of pediculation in biology helps scientists understand host-parasite dynamics.
3. In some species, pediculation can enhance survival by providing nutrients directly from the host.
4. Understanding pediculation is crucial for developing effective treatments for parasitic infections.
5. Researchers are exploring how pediculation affects the evolution of both parasites and their hosts.
